

Reporting Unregulated Contaminant Monitoring Rule Detections in your CCR.

Public water systems participating in UCMR sampling must **provide a special notice of the availability of all unregulated contaminant monitoring results** and **report detected unregulated contaminants in a separate table** in the CCR.

An explanation of why a system monitors for unregulated contaminants and a notice that the results are available may be included such as:

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted. In (year of report) (Public water system) participated in the fourth round of the Unregulated Contaminant Monitoring Rule (UCMR 4). For a copy of the results please call _____ at _____.

Detected contaminants that are sampled for under the unregulated contaminant monitoring rule must be included in a separate table in the report for the year in which they were sampled. At a minimum the table must contain the average of any monitoring results from the year, and the range of detections. Additional information and reference concentrations can be included. Information about these contaminants can be found at [US EPAs website](#) and in the [Data Summary](#). See example 1 below for an example of an unregulated contaminants table.

Example 1.

TABLE OF UNREGULATED CONTAMINANTS

Contaminants (Units)	Sample Year	Average Level Found	Range of Detections
Manganese (ppb)	2018	0.624	0.45-0.88
Haloacetic Acids (HAA5) (ppb)	2018	55.1	41.2-65.3
Haloacetic Acids (HAA9) (ppb)	2018	62.1	43.1-74.1
Haloacetic Acids (HAA6Br) (ppb)	2018	57.3	42.1-67.3

All detected contaminants, including haloacetic acids, that are sampled under UCMR 4 and not for compliance should be reported in this separate table.

Unregulated contaminants only need to be reported in the year in which they were sampled. Non-detected contaminants should not be included in the table of unregulated contaminants.
